Re: Error number [-2147220478]

Hi Mod Saifuddin

To check if request is blocked by firewall, **telnet PISERVER 5450**. If it is terminated then would request you to speak to firewall /security team.

Re: Error number [-2147220478]

Try it just now and it shows connect failed. Is it not because of refused connection from Pi server (trust problem) or the port is blocked by the IT guys?. How about the firewall status if the client can ping to the PI Server?

Re: Error number [-2147220478]

Yes, it is blocked by firewall. You will be able to ping to the server sometimes but port is blocked by the firewall team. Request you to check with IT team (WIFI and LAN firewall) connection from your site to PI server. If is it blocked by PI server then you check the log in SMT but telnet failure is something related to port on the firewall.
